

Workshop 4

STATIC ELECTRICITY

EQUIPMENT LIST

- 20 standard latex balloons
- 1 rigid PVC tube (16 mm in diameter)
- 1 roll of lightweight tissue paper
- 1 to 2 wool sweaters or pieces of felt fabric
- 1 pair of scissors (for cutting)
- 1 manual balloon pump

INSTALLATION STEPS

- Set up the experiment table in a draft-free area.
- Cut out fun shapes from tissue paper (small confetti, ghost or snake silhouettes).
- Lay the paper shapes flat on the table.
- Blow up several balloons and tie them off.
- Have the wool sweaters ready nearby, so the children can rub the balloons themselves.

The Snake Charmer (Wow Effect)

Cut the tissue paper into a spiral shape to make a snake. When you hold the charged balloon (rubbed against a sweater) or the PVC tube just above the snake's head, the snake will rise up and start to "dance" and levitate in the air without ever touching the balloon !
