

Workshop 6

FILTERS AND POLARIZATION

EQUIPMENT LIST

- 2 Flexible linear polarizing filters
- 1 White light source
- 1 Set of rigid, transparent plastic objects (rulers, CD cases, a roll of tape)
- 1 Small bottle of talcum powder or flour
- 1 Soft microfiber cloth

INSTALLATION STEPS

- Place the test table in an area protected from direct sunlight.
- Position the flashlight or light box flat, facing the users.
- Carefully peel off the two protective films from each polarizing sheet.
- Sprinkle a light layer of talcum powder on the adhesive side, then gently wipe it with a cloth to remove the adhesive properties.
- Place the first filter over the light source, then place the second one on top of it. Rotate the top filter until the screen turns black.

Magic Plastic (Wow Effect)

Slide a transparent ruler between the two black polarizing sheets.
Look through it : the plastic instantly turns pink, blue, and yellow !
Twist the object slightly to see the colors change !
